IN THE SPECIFICATION

Please amend paragraph 12 as follows:

Figure 1 schematically illustrates a vehicle door;

Please amend paragraph 13 as follows:

Figure 2 schematically illustrates another view of the vehicle door;

Please add the following paragraphs after paragraph 13:

Figure 3 schematically illustrates a vehicle door including a hook as a retainer; and

Figure 4 schematically illustrates a vehicle door including a molding as a retainer.

Please amend paragraph 27 as follows :

In Figure 1, the vehicle door 10 includes a retainer 42 which hides and maintains the cable harness 20 in place where the window glass module 24 exits the hollow box section 22. In one example, as shown in Figure 3, the retainer 42 is a hook member 42a, such as a clip, that grips the cable harness 20. The retainer 42 can also be a foamed material. Alternatively, as shown in Figure 4, the retainer 42 can be a specific molding 42b that allows the cable harness 20 to be immobilized and the continuity of the sealing line to be maintained. The retainer 42 can close off the set-back portion 34.
